

JORDAN STRANDE

Full Stack Engineer · AI / ML Engineer · Founder

(720) 331-2995 | StrandeJordan@gmail.com | jordanstrande.com | langelogic.com | Denver, CO

Full-stack engineer and AI systems builder with 3+ years of post-graduation experience shipping production software across web, mobile, cloud, and LLM-powered systems. Co-founder of Lange Logic LLC and architect of multiple revenue-generating SaaS products spanning AI agents, automated security, mobile CI/CD, and SEO infrastructure. Experienced leading engineering teams, designing distributed systems, and turning prototypes into customer-facing products. Former US Ski Team competitor — high performer under pressure.

TECHNICAL SKILLS

Languages: TypeScript · JavaScript · Python · SQL · Bash · Java · C / C++ · PHP · Deno

Frontend: React 18/19 · Next.js 14 · React Native · Expo · Vite · Tailwind CSS · Three.js · Monaco Editor · Tamagui

Backend: Node.js · Fastify · Express · FastAPI · Flask · GraphQL · Docker · Microservices · BullMQ · Redis

Edge / Cloud: Cloudflare Workers · Cloudflare KV · AWS (Lambda, EC2, S3, Cognito) · Google Cloud · Vercel · Supabase · Firebase · Oracle Cloud

Database: Postgres · Supabase (Auth, RLS, Edge Functions, Realtime) · Firebase / Firestore · Redis · Multi-tenant RLS

AI / ML: Anthropic Claude · OpenAI · Gemini · NVIDIA NIM · xAI · PyTorch · TensorFlow · LLM Fine-tuning · RAG · Agentic Workflows · MCP · LangChain

Mobile / Infra: React Native · Expo · Electron · Xcode / xcodebuild · Gradle · EAS · Turborepo · GitHub Actions · CI/CD

Security: AES-256-GCM · TLS 1.3 · MFA · RBAC · Penetration Testing · Exploit Chain Analysis · Audit Logging · HIPAA-aware design

Observability: Grafana · Sentry · Lighthouse / PageSpeed · CloudWatch · Uptime Monitoring · SSE Log Streaming

Testing: Jest · Cypress · Playwright · Postman · API contract testing

Tools: Docker · Wrangler · Figma · Jira · Git/GitHub · Swagger / OpenAPI · Agile / Scrum

PROFESSIONAL EXPERIENCE

Lead Developer & Project Manager · [Lingows Automation](#) · Lakewood, CO · 2024 – Present

AI Engineering & Automation

- Deliver a 30% productivity increase across enterprise deployments by architecting AI automation systems in Python, TensorFlow, React, and Node.js, moving from R&D prototype to production within each sprint cycle.
- Sustain 1,000+ requests/minute at 99.9% uptime on self-hosted Flask + Docker infrastructure, with circuit breaker patterns and Sentry/Grafana observability across all client deployments.
- Build LLM fine-tuning pipelines, RAG systems, and multi-agent orchestration layers, integrating validated approaches into client-facing products each release.

Engineering Leadership

- Lead a 7-engineer agile pod through sprint planning, stand-ups, and retrospectives, maintaining a two-week release cadence with zero critical regressions; define architecture standards and mentor engineers on API design, testing, and AI integration.
- Translate business requirements into technical specifications and delivery roadmaps, bridging stakeholder goals and engineering execution across all active client engagements.

Co-Founder & Lead AI Developer · [SpinFlow AI](#) · Lakewood, CO · 2024 – Present

Platform Architecture & AI Systems

- Took SpinFlow.ai from zero to Fortune-500 pilot in 12 months, shipping a multi-LLM SaaS on React/Next.js + Node TypeScript + Python microservices across AWS, Firebase, and Oracle Cloud.
- Built a no-code Agentic Flow Engine unifying five LLMs for enterprise workflow automation, secured with AES-256/TLS 1.3, MFA, RBAC, and full audit trails from day one; passed security review for Fortune-500 onboarding.
- Deployed Grafana, Sentry, and CloudWatch observability across all microservices; launched White-Glove Onboarding cutting average client go-live to under 30 days and support volume by 25%.

Product & Growth

- Shipped native Voice Capture and Chrome Extension converting speech and browser context into structured knowledge streams; ran investor demos, roadmap planning, and agile ceremonies for a distributed dev-ops pod.

Competitive Ski Team Coach · [Winter Park Resort](#) · *Winter Park, CO · 2019 – Present*

- Coach high school-level racers in advanced technique and race strategy; manage weekly parent communications with structured problem-solving and de-escalation, upholding team values of integrity, excellence, and accountability.

Geek Squad Advanced Repair Agent · [Best Buy](#) · *Lakewood, CO · 2022 – 2024*

- Reduced per-case remediation time across the regional micro-market by engineering a Bash automation script for the full macOS malware-removal workflow, adopted company-wide; documented techniques that improved team throughput and reduced escalation rates.

FOUNDED PRODUCTS · LANGE LOGIC LLC · [LANGELOGIC.COM](#)

Olana AI — Proactive Multi-Model AI Agent Platform [langelogic.com/products/olana-ai](#)

React 19 · React Native / Expo · Electron · Node.js · Supabase · Monaco Editor · Playwright · node-pty · Docker · Anthropic · OpenAI · Gemini · xAI · NVIDIA NIM · MCP · Turborepo

- Built a proactive multi-model agent platform that routes tasks across Anthropic, OpenAI, Gemini, xAI, and NVIDIA NIM, re-weighting model selection based on outcomes and session context; agents track goals, run scheduled background tasks, and proactively surface context-aware actions based on accumulated memory and user patterns.
- Deployed across mobile (React Native/Expo), web (React 19), desktop (Electron with Playwright, node-pty, filesystem and OS control, wake-word/STT voice), embeddable webchat, and 13 messaging channels including Slack, Discord, WhatsApp, Telegram, and Teams — all backed by shared Supabase/Postgres with Realtime sync and encrypted credential storage.
- Shipped an in-agent coding studio with Monaco Editor, GitHub repo integration, sandboxed Docker execution, live dev-server preview, and checkpoint/diff/branch management; paired with an extensible skill/plugin SDK, MCP support, and auto-generated tools from user OAuth apps — enabling the agent to open a repo, run and debug code, and iterate on fixes without leaving the agent interface.

Crawlable AI — AI SEO & Edge Pre-rendering SaaS [crawlableai.com](#)

Cloudflare Workers · Browser Rendering / Puppeteer · KV Cache · Supabase / Postgres · 27 Deno Edge Functions · React 18 · Vite · Google Search Console · Gemini · Stripe · Vercel

- Made JavaScript SPAs instantly crawlable for 150+ bots — Googlebot, GPTBot, ClaudeBot, PerplexityBot — by intercepting traffic at the Cloudflare edge, rendering via headless Chromium, and serving static HTML from global KV cache in under 50 ms; zero-code CNAME onboarding.
- Powered a full AI SEO suite via 27 Deno Edge Functions and a 37-migration multi-tenant Postgres schema: AI metadata generation, JSON-LD AEO injection, Lighthouse cron audits, SERP rank tracking, backlink sync, content-gap detection, AI citation monitoring, and A/B variant learning that auto-promotes winning SEO title/meta combinations.

RedLens — AI-Powered Red Team & Automated Pentesting [redlens.langelogic.com](#)

Python · FastAPI · React 18 · TypeScript · Supabase / Postgres · Playwright · Docker · Anthropic · OpenAI · NVIDIA NIM · MCP (remote + local) · Three.js · GitHub OAuth

- Delivered full pentest-grade reports in approximately two minutes via 17 parallel recon modules (headers, TLS, auth, APIs, CORS, cloud misconfigs, cryptography, DNS, SPF/DKIM/DMARC, dependency risks, and more) feeding into a multi-model AI engine that produces exploit chains, CWE classifications, and remediation code.
- Extended coverage with source-aware scanning of migrations, auth middleware, and commit history for removed secrets via GitHub OAuth; tri-modal auditing correlating live site, linked source repo, and mobile APK/IPA static analysis into one unified report; exploit chain validation with CWE classification; and native MCP/CLI integrations for scan triggering and fix guidance inside Cursor, Claude Code, ChatGPT, and JetBrains.

Forge — Self-Hosted Mobile CI/CD Platform [langelogic.com](#)

Next.js 14 · Fastify · Node.js · TypeScript · Supabase / Postgres · BullMQ · Redis · Docker · Xcode / xcodebuild · Gradle · Cloudflare Tunnel · Stripe · Commander.js

- Replaced Expo's hosted build service with a self-hosted, EAS-compatible mobile CI/CD platform: iOS builds use Xcode with temporary keychains and provisioning profiles, signed and submitted via App Store Connect tooling; Android builds run in Docker-isolated Gradle producing signed .apk/.aab artifacts submitted via the Google Play Developer API — triggered through a CLI, REST API, or Next.js 14 dashboard with live SSE log streaming.
- Built a secure multi-tenant backend with Supabase/Postgres/RLS, AES-256-GCM credential encryption, bcrypt API key hashing, BullMQ/Redis build queuing, Cloudflare Tunnel for private worker exposure, signed webhook delivery, and Stripe subscription enforcement with org/role management.
